Question				Marking details	Marks Available					
					AO1	AO2	AO3	Total	Maths	Prac
3.	(a)			0.8 (1) Conversion to 800 kW (1) 6 hrs (1) 800 × 6 = 4800 (1) ecf can be allowed for incorrect data taken from the graph as long as working shown Answer of 4.8×10^n on answer line – 3 marks where n is not 3	1	3		4	4	
	(b)	(i)		3600/0.6 = 6000 (1) 6000 × 3 = 18 000 (1)		2		2	2	
		(ii)		6000 (1) 6000 × 0.55 (1) = 3300 km^2 (1) Allow: answer for part (i) × 0.55 (1) = ans (1) e.g. 18 000 × 0.55 (1) = 9900 (1)		3		3	3	
	(c)	(i)		Cost of generating electricity per kW/hr is 2.8p with nuclear compared with 5.6 p for wind/ nuclear unit is half the price of wind (1) Need to replace wind turbine 3 times / Need 18 000 turbines for each nuclear power station / accept you need 6000 turbines (1) £54 000 million compared £4000 million for one nuclear power station (over lifetime) (1) No numerical values – 0 marks			3	3
