Examiner only

3. *(a)* Measurements from an experiment to find the density of an irregular shaped solid are given below.

Mass of the solid = 26.0 g
Volume of water in measuring cylinder = 40 cm^3
Volume of water and solid = 48 cm^3

Use an equation from page 2 and the information above to calculate the density of the solid. [3]

Density = ... g/cm^3

(b) Describe how you would change the experiment to find the density of an irregular shaped solid that floated on water. [3]

....
