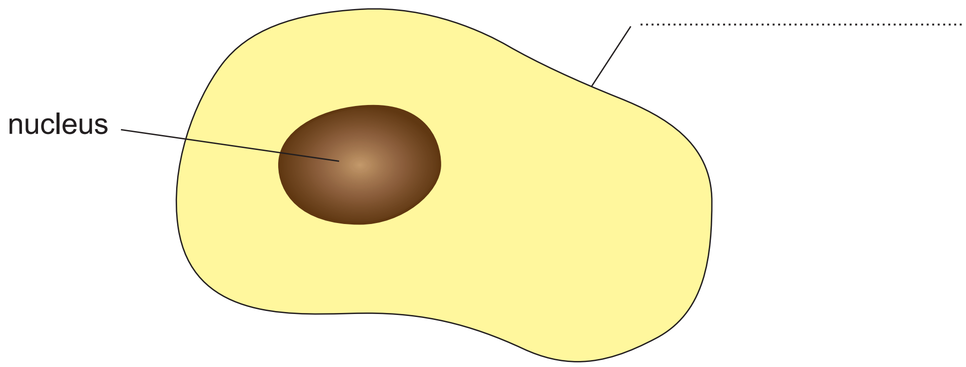
Examiner only

Answer **all** questions.

1. The diagram below shows an animal cell.

chloroplast	vacuole	cell membrane



(a) (i) Use the correct word(s) from the box to complete the labelling of the animal cell. [1]

(ii) Tick (✓) the box next to a structure found inside the nucleus. [1]

chloroplast ☐

chromosome ☐

cellulose ☐

(iii) Tick (✓) the box next to the correct statement about the function of the nucleus. [1]

gives structural support of the cell ☐

controls the activity of the cell ☐

the site of photosynthesis ☐

Examiner only

(b) Cells are organised into tissues. Complete the following sentences by underlining the correct word in each bracket. [2]

Tissues are a collection of many (**different / similar / bigger**) cells.

Tissues work together to perform a (**smaller / particular / bigger**) function.

(c) The cell membrane controls the entry and exit of all substances into and out of the cell. Many substances are transported into the cell by diffusion.

(i) Complete the following sentence by underlining the correct word in each bracket. [2]

Diffusion is the movement of substances from a region of (**high / low / zero**) concentration to a region of (**higher / lower / negative**) concentration.

(ii) Oxygen is a gas that diffuses into the cell. Tick (✓) the box next to the gas that diffuses **out of** the cell. [1]

argon ☐

carbon dioxide ☐

helium ☐

3445U101 03

(iii) I. The oxygen that diffuses into the blood is needed by all cells to release energy.

Circle the process that releases energy. [1]

excretion **respiration** **absorption**

II. Complete the equation for this process using the correct terms from the box. [2]

glucose	protein	sulfur	salt	carbon dioxide

.... + oxygen ⟶ .... + water
