					AO1	AO2	AO3	Total	Maths	Prac
3				**Indicative content:** Determine the mass (g) of the dry pebble using a balance. Place a suitable volume of water into an empty measuring cylinder ensuring that there is space left for the pebble. Record the volume in cm^3. Carefully place the pebble into the measuring cylinder and determine the new volume. Calculate the volume of the pebble by subtracting the volume of the water from the volume of the water + the pebble. Determine the density using the formula: $\text{density} = \frac{\text{mass}}{\text{volume}}$ Give the answer with a suitable unit e.g. g / cm^3. **5-6 marks** Fully describes the method in a logical way which could be followed. *There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.*	6			6		6

Question				Marking details	AO1	AO2	AO3	Total	Maths	Prac
					Marks Available					
				3-4 marks Describes most of the method but may be unclear about which measuring instruments are used or how the data is processed. *There is a line of reasoning which is partially coherent, largely relevant, supported by some evidence and with some structure. The candidate uses mainly appropriate scientific terminology and some accurate spelling, punctuation and grammar.* **1-2 marks** Describes how to make a measurement or how to calculate density. *There is a basic line of reasoning which is not coherent, largely irrelevant, supported by limited evidence and with very little structure. The candidate uses limited scientific terminology and inaccuracies in spelling, punctuation and grammar.* **0 marks** *No attempt made or no response worthy of credit.*
