7	*(a)*			Hydrogen (1) Helium (1) Balanced with (1)	3			3		
	(b)			**Indicative content:** **Common to both** Both stars began from a cloud of gas and dust. As the cloud collapsed a protostar formed which then developed into a main sequence star. **Sun** The Sun will eventually become a red giant and then a white dwarf. **More massive star** The more massive star will stay on the main sequence for a shorter time before it becomes a supergiant. It will then explode in a supernova, ejecting heavy elements into space. What remains will either be a neutron star or, if the star was massive enough to begin with, a black hole. **5-6 marks** All the main stages in the life cycle are named correctly for both stars. *There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.* **3-4 marks** Correctly describes the life cycle of 1 of the stars or attempts both with a few omissions. *There is a line of reasoning which is partially coherent, largely relevant, supported by some evidence and with some structure. The candidate uses mainly appropriate scientific terminology and some accurate spelling, punctuation and grammar.*	6			6
