Question				Marking details	Marks Available					
					AO1	AO2	AO3	Total	Maths	Prac
5 **FT**	(a)	(i)		A-trachea (1) B- intercostal muscles (1) C- ribs (1) D- diaphragm (1)	4					
		(ii)		**Indicative content:** The intercostal muscles and the diaphragm contract. The rib cage moves up and out and the diaphragm flattens/lowering to increase the volume. This decreases the air pressure within our lungs, causing air to rush in from outside. At the end of a breath, the intercostal muscles and diaphragm relax, returning to their starting position, which decreases the volume of the chest cavity. The decreased space and increased air pressure in the lungs forces air out. **5-6 marks** The terms intercostal muscles, diaphragm and ribs are used correctly. The sequence of changes is correct and there is a reference to air pressure changes. *There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.* **3-4 marks** Some references to intercostal muscles/diaphragm/ribs/pressure changes. However description will not be complete. *There is a line of reasoning which is partially coherent, largely relevant, supported by some evidence and with some structure. The candidate uses mainly appropriate scientific terminology and some accurate spelling, punctuation and grammar.*	6					

Question				Marking details	Marks Available					
					AO1	**AO2**	**AO3**	**Total**	**Maths**	**Prac**
				1-2 marks Limited reference to intercostal muscles, diaphragm, ribs or pressure changes. *There is a basic line of reasoning which is not coherent, largely irrelevant, supported by limited evidence and with very little structure. The candidate used limited scientific terminology and inaccuracies in spelling, punctuation and grammar.* **0 marks** No attempt made or no response worthy of credit.						
	(b)			2 breaths/minute (1) less / slower (1) 10 minutes (1)		3			0 0 1	3
	(c)	(i)		oxygen (1) carbon dioxide (1) Accept CO2, CO^2, O2 No not accept O or CO	2					
		(ii)		diffusion	1					
		(iii)		Any 2 × (1) from: large surface <u>area</u> (1) good blood supply (1) thin <u>walls</u> (1) moist (1)	2
