Question				Marking details	Marks available					
					AO1	AO2	AO3	Total	Maths	Prac
6				**Indicative content:** • definition of isomers – having the same molecular formula but different structural formulae • C_4H_{10} represents isomerism in alkanes – dependent on chain length • C_4H_8 represents isomerism in alkenes – dependent on position of double bond • isomers of C_4H_{10} • naming butane and methylpropane • isomers of C_4H_8 • naming but-1-ene and but-2-ene	6			6		
				5-6 marks Correct definition of an isomer given; clearly explains isomerism in both alkanes and alkenes using the examples given; some isomers named *There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.* **3-4 marks** Attempt at definition of an isomer given; explains isomerism in either an alkane or alkene using one of the examples given *There is a line of reasoning which is partially coherent, largely relevant, supported by some evidence and with some structure. The candidate uses mainly appropriate scientific terminology and some accurate spelling, punctuation and grammar.* **1-2 marks** Definition of an isomer given or an example of isomerism shown *There is a basic line of reasoning which is not coherent, largely irrelevant, supported by limited evidence and with very little structure. The candidate uses limited scientific terminology and inaccuracies in spelling, punctuation and grammar.* **0 marks** *No attempt made or no response worthy of credit.*
