	(c)			from the equation 552 g of Ag_2CO_3 gives 432 g of Ag (1) 1 g of Ag_2CO_3 gives $\frac{432}{552}$ g of Ag (1) 13.8 g of Ag_2CO_3 $\frac{432}{552} \times 13.8$ g of Ag = 10.8 g (1) ecf possible alternative method moles of Ag_2CO_3 = $\frac{13.8}{276}$ = 0.05 mol (1) 2 mol of of Ag_2CO_3 gives 4 mol of Ag therefore 0.10 mol of Ag produced (1) mass of Ag = n × M_r = 0.10 × 108 = 10.8 g (1) ecf possible second alternative method (applying conservation of mass) percentage of Ag in Ag_2CO_3 = $\frac{216}{276} \times 100$ = 78.3% (1) mass of Ag on left-hand side = $\frac{78.3}{100} \times 13.8$ = 10.8 g (1) so 10.8 g of Ag formed (1) ecf possible		3		3	3
