3	(a)			**Indicative content:** **Description of motion** The car travels at a constant speed for 100 km in 2 hours. The car remains stationary for 1 hour. The car travels at a constant speed for 80 km in 1 hour. The car travels at a constant speed back to the start, for 180 km in 2 hours. **Comparison of speeds** Speed is 50 km/h in first 2 hours. Speed is 0 km/h for next hour. Faster speed of 80 km/h in next hour **or** between 3 and 4 hours. Fastest speed of 90 km/h in opposite direction for next 2 hours **or** between 4 and 6 hours. **5–6 marks** Detailed description of motion including data and comparison. *There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.* **3–4 marks** Description of motion including some data/comparison. *There is a line of reasoning which is partially coherent, largely relevant, supported by some evidence and with some structure. The candidate uses mainly appropriate scientific terminology and some accurate spelling, punctuation and grammar.*	3	3		6	6	

Question				Marking details	Marks available
