

Question				Marking details	Marks Available					
					AO1	AO2	AO3	Total	Maths	Prac
5	(a)			Fuel is <u>burned</u> to heat <u>water</u> [to make steam] (1) [Kinetic energy] of <u>steam</u> turns or drives or rotates a <u>turbine</u> (1) [Turbine turns or drives] <u>generator</u> producing electricity (1) Don't accept moves or pushes.	3			3		
	(b)			Useful power = $\frac{3.2}{40} \times 100 = 8$ [MW] (1) 8 MW = 75 % (1) So total input = $\frac{8}{75} \times 100 = 10.7$ [MW] (1) so she is not correct - to award full marks the conclusion must be present Alternative: 40 % of 75 % = 30 % (1) 30 % = 3.2 [MW] (1) so total input = $\frac{3.2}{30} \times 100 = 10.7$ [MW] (1) so she is not correct - to award full marks the conclusion must be present Alternative: $\frac{75}{100} \times 20 = 15$ [MWh] (1) $\frac{40}{100} \times 15 = 6$ [MWh] (1) which is not 3.2 [MWh] (1) so she is not correct - to award full marks the conclusion must be present Alternative: $\frac{3.2}{20} \times 100 = 16$ [%] (1) 40 % of 75 % = 30 % (1)			3	3	3	

			16 is not equal to 30 % (1) so she is not correct - to award full marks the conclusion must be present						
	(c)		$I = \frac{P}{V}$ (1) manipulation $I = \frac{1200}{400}$ (1) substitution $I = 3\,000\text{ [A]}$ (1) answer Answer = 3×10^n where n is not 3 award 2 marks	1	1			3	3
			Question 5 total	4	2	3	9	3	0
