

SECTION AAnswer **all** questions.

1. A fission reaction of uranium is:

Masses:

$${}_{92}^{235}\text{U} = 235.043\,930\,\text{u}$$

$${}_{56}^{141}\text{Ba} = 140.914\,412\,\text{u}$$

$${}_{36}^{92}\text{Kr} = 91.926\,156\,\text{u}$$

$$m_{\text{neutron}} = 1.008\,665\,\text{u}$$

$$1\,\text{u} = 931\,\text{MeV}$$

- (a) Calculate the energy released in this reaction giving your answer in MeV.

- (b) If 1.2 kg of
- ${}_{92}^{235}\text{U}$
- undergoes this reaction, show that the total energy released is approximately
- $8.5 \times 10^{13}\,\text{J}$
- .
