

2. On one October day in the UK, most of our electricity was generated from wind, nuclear and gas as shown in the pie chart.

- (a) (i) Calculate the total % of the electricity generation that came from wind, nuclear and gas. [1]

total = %

- (ii) Calculate how much electricity was generated by **other** sources such as biomass, hydroelectric and solar. [1]

electricity from other sources = %

Examiner
only

(b) Match the name of the source on the left with a correct statement on the right.

[3]

Source	Statement
Wind	Produces radioactive waste
Biomass	Depends on the weather
Nuclear	Uses the energy stored in plants
Gas	Is a fossil fuel
