

2. A teacher demonstrates waves using a ripple tank. She changes the frequency of the waves produced and the class observes the effect on their wavelength.

Next, the class investigates the link between frequency and wavelength using a virtual ripple tank simulation.

The table below shows their results.

Frequency (Hz)	$\frac{1}{\text{frequency}}$ (s)	Wavelength (cm)
20.0	0.05	1.0
10.0	0.10	2.0
6.7	0.15	3.0
5.0	0.20	4.0
4.0	0.25	5.0

- (a) (i) Plot the data on the grid below and draw a suitable straight line. [3]

Wavelength (cm)

- (ii) **Complete** the following sentences by underlining the correct word or phrase in the brackets. [2]

- I. As $\frac{1}{\text{frequency}}$ increases the wavelength [**increases / decreases / stays the same**].
- II. As frequency increases the wavelength [**increases / decreases / stays the same**].

- (iii) I. Use data from the table to state the wavelength of the waves at a frequency of **10 Hz**. [1]

Wavelength = cm

- II. Use the equation:

$$\text{wave speed} = \text{frequency} \times \text{wavelength}$$

to determine the speed of the waves at a frequency of **10 Hz**. [2]

Speed = cm/s

- (b) (i) Electromagnetic waves are used to communicate with satellites. Some satellites remain above the same point on the Earth to allow constant communication.

Complete the following sentences about communications satellites by underlining the correct word or phrase in the brackets. [4]

Electromagnetic waves are (**longitudinal / parallel / transverse**) waves.

TV signals are sent to satellites in (**geothermal / geosynchronous / geostationary**) orbits using (**microwaves / visible light / gamma rays**).

These satellites orbit above the (**poles / equator / axis**) of the Earth.

- (ii) A satellite orbits the Earth in a circular orbit, once every 24 hours. The radius of its orbit is 42 164 km.

- I. Use the equation:

$$\text{circumference of a circle} = 2\pi r \quad (\text{where } r = \text{radius and } \pi = 3.14)$$

to calculate the distance the satellite travels in one orbit. [1]

Distance = km

II. Use the equation:

$$\text{speed} = \frac{\text{distance}}{\text{time}}$$

to calculate the speed of the satellite in km/h.

[2]

Speed = km/h

- (iii) Maddie suggests that the satellite orbits at the same speed as a point on the Earth's surface moves, so that it always stays above the same point on the Earth. Explain whether or not you agree. [2]
