	(b)			Indicative content: <u>Damping:</u> Damping linked to resistive force. It dissipates energy or linked to energy loss. Amplitude decreases with time. Link to energy loss to surroundings. Critical damping. <u>Resonance:</u> Periodic force. Happens when frequency is equal to the natural frequency. Amplitude of oscillation becomes large. Damping lowers the resonance peak. Reasonable resonance graph. <u>Real systems:</u> Any sensible real system e.g. bridges / structural / swings, tuning circuit Example of damping e.g. car suspension With a description of the driving force Explanation of whether resonance is good or bad.	6			6
