

Question				Marking details	Marks available				Maths	Prac
					AO1	AO2	AO3	Total		
9	(a)	(i)		Stefan-Boltzman law / Stefan's law (1) Substitution: $P = 4 \times \pi \times (7.0 \times 10^8)^2 \times 5.67 \times 10^{-8} \times (5\,800)^4$ (1) $P = 3.95 \times 10^{26}$ W seen (1)	1 1	1		3	2	
		(ii)	I	4	1			1		
			II	Positron [accept anti-electron]	1			1		
		(iii)		Production of 1 helium nucleus releases 26.7 MeV = 4.27×10^{-12} J (1) $\frac{4.0 \times 10^{26}}{4.27 \times 10^{-12}} = 9.4 \times 10^{37} \text{ s}^{-1}$ produced (1) [or $9.3 \times 10^{37} \text{ s}^{-1}$] [Accept 9.2×10^{37} if 3.95×10^{26} used]		2		2	2	
	(b)			Substitution into $I = \frac{P}{4\pi R^2}$ i.e. $I = \frac{4.0 \times 10^{26}}{4\pi (1.5 \times 10^{11})^2}$ (1) $I = 1\,415$ W (approx. 50% of surface intensity) (1) [1397 W using 3.95×10^{26} W]	1	1		2	2	
	(c)	(i)		Application of $P = IV$ to find max P from graph: Max $P = 6.4 \times 20.5 = 128$ W [accept 120 to 135 W] (1) % efficiency = $\frac{128 \times 100}{750}$ (1) % efficiency = 17% [Accept 16% to 18%] (1) [Alt: calculate 15% of 750 W and show is less]			3	3	2	
		(ii)		$\frac{1000}{128} = 7.8$ so 8 panels needed (1) [accept 8 or 9, depending on P output in (i)] [Answer must be whole number] Mean power will be less than 750 W (or equivalent) (1) Changing daily/seasonal conditions- need to be specific e.g. less light at night or less light in winter (1)		3		3
