					AO1	AO2	AO3	Total	Maths	Prac
		(ii)		Substitution: in $I = \frac{P}{V}$; current = $\frac{2\,760}{230}$ (1) = 12 [A] (1) [12 by itself on answer line → 0 marks; with above working → 2 marks] Substitution: in $R = \frac{V}{I}$; resistance = $\frac{230}{12}$ ecf (1) = 19.17 [Ω] (1) [accept 19.2 Ω or 19 Ω, not 19.6 Ω] OR for third and fourth marks: $P = I^2 R$ so substitution: $2\,760 = R \times 12^2$ (1) = 19.17 [Ω] (1) or for all the marks Use of $P = \frac{V^2}{R}$ (1) Substitution: $2760 = \frac{230^2}{R}$ (1) Manipulation: $R = \frac{230^2}{2760}$ (1) Answer = 19.17 Ω (1)	1	1
