

Question				Marking details	Marks Available					
					AO1	AO2	AO3	Total	Maths	Prac
3				Indicative content: Determine the mass (g) of the dry pebble using a balance. Place a suitable volume of water into an empty measuring cylinder ensuring that there is space left for the pebble. Record the volume in cm³. Carefully place the pebble into the measuring cylinder and determine the new volume. Calculate the volume of the pebble by subtracting the volume of the water from the volume of the water + the pebble. Determine the density using the formula: $\text{density} = \frac{\text{mass}}{\text{volume}}$ Give the answer with a suitable unit e.g. g / cm³. 5-6 marks Fully describes the method in a logical way which could be followed. <i>There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.</i>	6			6		6
