

Question				Marking details	Marks available					
					AO1	AO2	AO3	Total	Maths	Prac
5	(a)	(i)		Substitution: units used = power $\times$ time (1) i.e. power is {2400 or 2.4} and time is {2.5 or $\left(\frac{2.5}{60}\right)$ or (2.5×6) or $\left(\frac{15}{60}\right)$ } Correct answer i.e. 0.6 [kWh] (1) Award 1 mark for answers only of 0.1, 6, 36, 100, 600, 6000 and 36 000	1	1		2	2	
		(ii)		Cost = 0.6 ecf $\times 7 \times 34$ (1) Cost = 142.8 [p] (1) accept 143 [p] Award 1 mark for answer of 20.4 [p] or 4.2	1	1		2	2	
		(iii)		Any calculation that shows that power $\times$ time is the same for both kettles (1) e.g. for kettle A: units used = $\frac{2}{60} \times 3 \times 6 = 0.6$ So cost is the same so Sophia is correct (1) Conclusion mark can only be awarded if the calculation is present and is consistent with (a)(i) Alternative: $3 \times 0.033 \times 6 = 0.594$ [kWh] (1) The cost is similar so agree with Sophia or the cost is less so disagree with both of them (1) Conclusion mark can only be awarded if the calculation is present and is consistent with (a)(i)			2	2	1
