		(ii)		Washing at 30° uses <u>33%</u> less energy or time or units than at 40° / washing at 30° uses <u>67%</u> of the energy or time or units compared with 40° (1) and <u>50%</u> less energy or time or units than at 50° (1) so the claim is not correct (1) N.B. If only one of the higher temperatures is considered then award a maximum of 2 marks if the conclusion is consistent with their answer Alternative: At 40° a 40% reduction in units used = <u>0.45</u> units [compared to 0.5 units at 30°](1) At 50° a 40% reduction in units used = <u>0.6</u> units [compared to 0.5 units at 30°] (1) So the claim is not correct (1) N.B. If only one of the higher temperatures is considered then award a maximum of 2 marks if the conclusion is consistent with their answer Alternative: At 40° a 40% reduction in time = <u>54</u> minutes [compared to 60 minutes at 30°](1) At 50° a 40% reduction in time = <u>72</u> minutes [compared to 60 minutes at 30°] (1) So the claim is not correct (1) N.B. If only one of the higher temperatures is considered then award a maximum of 2 marks if the conclusion is consistent with their answer			3	3	3
