

SECTION A

Answer **all** questions in the spaces provided.

1. (a) Complete the equation below, which shows the reaction of benzaldehyde with hydrogen cyanide. [1]

- (b) Give the **formula** of the nucleophile that takes part in the reaction shown in part (a). [1]

.....

2. Decarboxylation occurs when a carboxylic acid is heated with sodalime.

State the name of the carboxylic acid that will produce propane when strongly heated with sodalime. [1]

.....

3. Ammonia is produced when an amide is heated with aqueous sodium hydroxide.

In an experiment 3.90 g of the aliphatic amide **T** gave 0.060 mol of ammonia.

Use this information to find the formula of the hydrocarbon group R, present in the amide **T**. [2]

Formula

4. (a) In acid solution the formula of the ion formed from phenylalanine is

Give the formula of the ion formed from phenylalanine in basic solution.

[1]

- (b) The melting temperatures of four compounds are shown in the table.

Compound	Melting temperature / °C
CH ₃ CH ₂ COOH	-21
CH ₃ CH(OH)COOH	18
CH ₃ CHBrCOOH	26
CH ₃ CH(NH ₂)COOH	289

Explain why the melting temperature of 2-aminopropanoic acid is very much higher than the other acids in the table.

[2]

.....

.....

.....

5. On detonation, the explosive RDX produces carbon monoxide, steam and nitrogen.

RDX
 M_r 222

Calculate the mass of RDX that would give 1.00 m^3 of gaseous products measured at 100°C and at 1 atm. Give your answer to an **appropriate** number of significant figures. [2]

(1 mol of any gas occupies a volume of 30.6 dm^3 under these conditions)

Mass of RDX = g

10
