

6. Olivia investigated the relative hardness of three samples of water, **A**, **B** and **C**.

She added soap solution to each sample separately and recorded the volume of soap solution needed to get a permanent lather. Her results are shown in the table.

Water sample	Volume of soap solution needed to get a permanent lather (cm ³)
A	1.0
B	14.0
C	11.0

Describe how you would repeat this investigation, including enough detail to show that you will be carrying out a fair test. Assuming that you get similar results to Olivia, state and explain the conclusion you would reach.
