6. Earthquake monitoring stations can detect P and S waves from earthquakes. A seismic trace contains information about times of arrival for each wave type.

- (a) The diagram shows some paths taken by seismic waves travelling from an earthquake at **X**. There are three seismic monitoring stations: **A**, **B** and **C**.

Compare the seismic traces obtained at **A**, **B** and **C**, explaining any similarities **and** any differences. [6 QER]

(b) S waves are transverse waves and P waves are longitudinal waves. Describe the difference between transverse and longitudinal waves.
