

Question				Marking details	Marks available					
					AO1	AO2	AO3	Total	Maths	Prac
5	(a)			continuously changes direction (1)	1			1		
	(b)	(i)		Substitution into $E = Pt$: $2\,600 \times 15$ (1) = 39 000 [J] Total energy = 39 000 ecf $\times 6$ (1) = 234 000 [J] (1) cao Alternative 15×6 (1) = 90 [s] $E = P t$ = $2\,600 \times 90$ ecf (1) = 234 000 [J] (1) cao NB $\times 15$ (1) $\times 6$ (1) Answer 234 000 (1) $15 \times 6 = 90 \rightarrow 1$ mark only Use of 230 V in calculation $\rightarrow 0$ marks.	1	1 1		3	3	
		(ii)		Substitution: $\frac{2\,600}{230}$ (1) =11.3 [A] (1) [accept 11 A]	1	1		2	2	
		(iii)		same answer as (ii): expect live =11.3 and neutral = 11.3 (1) earth = 0 (1)	1	1		2		
	(c)			[Detects] {current / magnetic field} difference (1) between the live and neutral [leads] (1)	2			2		
	(d)			$\frac{1}{2}$ power (1) same {number of kWh / number of units / energy} (1) Or by calculation $1300\text{ W} \times 30\text{ s}$ (1) = 39 000 J + comparison with $2\,600 \times 15$ [or 39 000](1) To award 2 marks 'claim is not true' [or equiv] must be seen.			2	2	1
