3	(a)			A to B (1)		1		1		
	(b)			$a = \frac{(6-0)}{3}$ (1-substitution) = 2 (1-answer) m/s ² (1) Accept m/s/s Or other valid pairs e.g. $\frac{2}{1}, \frac{4}{2}, \frac{3}{1.5}$ Alternative: $a = \frac{(600-0)}{3}$ (1-substitution) = 200 (1-answer) cm/s ² (1) Accept cm/s/s	1 1	1		3	2	
	(c)			$F = 110 \times 2$ (ecf) (1-substitution) = 220 [N] (1)	1	1		2	2	
	(d)			9 (1) [-0.6 =] 8.4 (1) [s] N.B. Award two marks for 8.4 [s] if no workings shown Award 1 mark of 9 [s] on the answer line	1	1		2	2	
	(e)			Constant velocity (1) For only 6 s (1) Alternative: It accelerated (1) For 3 s (1) Alternative: It decelerated (1) For 2 s (1) Alternative: It accelerated and decelerated or its speed changed or it wasn't at a constant speed (1) For 5 s (1) Disagree – no mark on its own but is required to award full marks			2	2	2	

Question				Marking details	Marks Available					
					AO1	AO2	AO3	Total	Maths	Prac
	(f)			On an icy pavement it is harder to slow down / it's slippery / less friction (1) Don't accept: icy So the stopping time is longer so the claim is correct (1) Alternative for the 2nd mark: So the stopping distance is longer / area is bigger so the claim is correct (1) Alternative for the 2nd mark: So the deceleration / slope is less so the claim is correct (1)			2	2
