					AO1	AO2	AO3	Total	Maths	Prac
3				Indicative content: Conduction Atoms / particles gain energy and vibrate faster Energy is passed on by collisions Free electrons travel faster through the structure Transferring energy Convection Water molecules gain energy and move further apart Hot water is less dense and rises The rising water transports energy through the water. More dense colder water drops and the cycle continues. 5–6 marks Detailed explanation of both conduction and convection. <i>There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.</i> 3–4 marks Detailed explanation of either conduction or convection or partial description of both. <i>There is a line of reasoning which is partially coherent, largely relevant, supported by some evidence and with some structure. The candidate uses mainly appropriate scientific terminology and some accurate spelling, punctuation and grammar.</i>	6			6

				1–2 marks Partial explanation of either conduction or convection. <i>There is a basic line of reasoning which is not coherent, largely irrelevant, supported by limited evidence and with very little structure. The candidate uses limited scientific terminology and inaccuracies in spelling, punctuation and grammar.</i> 0 marks <i>No attempt made or no response worthy of credit.</i>
