4	(a)			5 points plotted correctly to within <1 small square division (2) 4 correct (1) 3 or less (0) Straight line drawn [within the range of points] with a ruler through the points <1 small square division from plotted points, avoiding the anomalous point (1)		3		3	3	3
	(b)	(i)		Reading taken from candidate's graph (eg. 5.0 [N]) [<1 small square tolerance]		1		1	1	1
		(ii)		Use of a pair of complementary values, e.g. $m = 5.0$ ecf from graph $\div 2.0$ (1) [<1 small square tolerance] = 2.5 [kg] (1) NB. Use of (4.0 N, 2.6 m/s ²) only credited for either mark if the candidate's graph passes through the point.	1	1		2	2	2
		(iii)		Straight(ish) line with smaller positive gradient (by eye) drawn always below the original one. NB does not need to pass through the origin but cannot meet the existing graph [except at the origin].		1		1	1	1

Question				Marking details	Marks available					
					AO1	AO2	AO3	Total	Maths	Prac
	(c)			Possible answers: $2 \times 3.2 \text{ [m/s}^2\text{]} = 6.4 \text{ [m/s}^2\text{]} \text{ (1)}$ $\neq 5.6 \text{ [m/s}^2\text{]}$ so suggestion not correct (1) $16 \text{ [N]} / 5.6 \text{ [m/s}^2\text{]} = 2.9 \text{ [kg]} \text{ (1)}$ $\neq 2.5 \text{ [kg]}$ ecf from (b)(ii), so suggestion not correct $16 \text{ [N]} / 2.5 \text{ [kg]} \text{ (ecf from (b)(ii))} = 6.4 \text{ [m/s}^2\text{]} \text{ (1)}$ $\neq 5.6 \text{ [m/s}^2\text{]}$ so suggestion not correct Alternative: Adding accelerations from forces adding up to 16 N, e.g. $4.8 + 0.8 + 0.8 = 6.4 \text{ (1)}$ $\neq 5.6 \text{ [m/s}^2\text{]}$ so suggestion not correct (1) NB. Use of (4.0 N, 2.6 m/s²) not penalised in this part, e.g. from 12 N + 4 N $4.8 \text{ [m/s}^2\text{]} + 2.6 \text{ [m/s}^2\text{]} = 7.4 \text{ [m/s}^2\text{]} \text{ (1)}$ $\neq 5.6 \text{ [m/s}^2\text{]}$ so suggestion not correct. (1) Alternative: Showing clearly that a different force, i.e. 14 N ecf, gives an acceleration of 5.6 m/s² (1) $\neq 16 \text{ [N]}$ so suggestion not correct (1)			2	2
