

3. Kylie carries out an experiment, in class, to measure the density of a liquid. She places an empty measuring cylinder on a balance and pours the liquid into it. She records the reading from the balance for different volumes of liquid. Her results are shown in the table and on the graph.

Volume of liquid (cm ³)	Reading on balance (g)
20	44
40	68
60	92
80	116
100	140

Use the information above to answer the following questions.

- (a) State the mass of the empty measuring cylinder. g

[1]

- (b) Calculate the mass of liquid in the measuring cylinder when its volume is 100 cm^3 . [2]

Mass of liquid = g

- (c) Use an equation from page 2 to calculate the density of the liquid that Kylie used and state the unit of your answer. [3]

Density =

Unit =
