

- 6.** On a cold day a vacuum flask can be used to keep drinks hot for many hours. The diagram shows a vacuum flask with its main features labelled.

- (a) Explain in terms of conduction, convection and radiation how the labelled features of the flask help to keep the drink hot for such a long time. [6 QER]

- (b) A drink at 90°C is poured into the flask. After 2 hours the temperature of the drink is 80°C . After 10 hours the temperature of the drink is 60°C .

The company who make the vacuum flask claim that a hot drink contained in the flask will cool down by 5°C every hour. Explain if the claim made by the company is always correct. [2]
