

Answer all questions.

1. Three types of wave spread from an earthquake. They are called P waves, S waves and surface waves. The diagram shows waves spreading out from an earthquake at X to monitoring stations A, B and C on the Earth's surface.

- (a) State **two** differences between P and S waves. [2]

.....

.....

.....

.....

- (b) Put a tick (✓) in the correct boxes in the following table to show which type of wave is detected at each point. The first row has been completed for you. [3]

Monitoring stations	P wave	S wave	Surface wave
A	✓	✓	✓
B			
C
