

Answer all questions.

1. (a) Light from distant galaxies is changed as it travels through the Universe.

Tick (✓) the **three** correct statements below.

[3]

The wavelengths of light from distant galaxies have decreased.

☐

Distant galaxies look red.

☐

Absorption spectra from distant galaxies show red shift.

☐

The Universe has expanded since the light was given out from distant galaxies.

☐

Light received from our Sun is shifted to the blue end of the spectrum.

☐

The Sun's absorption spectrum shows no red shift.

☐

- (b) Name the model of the origin of the Universe that is supported by cosmological red shift. [1]
