Examiner only

6. Joanne moves into an old house and has **up to £1500** to spend on improving the insulation. She finds the following information about different types of insulation.

Type of insulation	Cost to buy (£)	Estimated annual savings (£)	Estimated payback time (years)	Estimated annual reduction in CO_2 emissions (kg)
additional loft	425	25	17	55
cavity wall	1200	300	4	670
floor	1500	75	20	180
draught proofing	225	45	5	120

Explain which **two** types of insulation she should fit to her house.
Include in your answer:

- The advantages of insulating the house
- The two types of insulation she should fit
- The reasons why she should choose these two types of insulation. [6 QER]
