

Question				Marking details	Marks Available					
					AO1	AO2	AO3	Total	Maths	Prac
2.	(a)			Movement (of substances) from a high to low concentration / from where there are a high number of particles to a low(er) number of particles	1			1		
	(b)			The particles should move from higher (concentration) to lower (concentration) / from left hand side to right hand side (1) The concentration {should be the same / equal} (after 30 minutes) / number of particles should be the nearly the same either side (of the membrane after 30 minutes) (1) Wouldn't be A as they've all moved / Should be C (1) (so disagree)			3	3		
	(c)			Maintains a concentration gradient (1) (Replacing air in alveolus rich in O₂ and low in CO₂) by breathing / from the air (1) blood supply (to remove oxygen) (1)	3			3		
	(d)			Diffusion high to low conc <u>and</u> in AT low to high conc (1) Diffusion {passive / no ATP needed / no energy needed} <u>and</u> AT {active / ATP required / energy required} (1)	2			2
