4				Indicative content MRSA control measures include hand washing, thorough cleaning of hospital wards, use of alcohol gels, isolation of patients, use of sterile dressings, as well as screening of patients using swabs to detect the presence of MRSA before being operated on. Bacteria such as MRSA have become resistant to antibiotics. This could be due to the use of antibiotics in animal feeds and animal treatments, not completing the course of antibiotics, as well as the over-prescription for humans. These have caused mutations. 5– 6 marks Detailed account of how MRSA has developed and several control measures described. <i>There is a sustained line of reasoning which is coherent, relevant, substantiated and logically structured. The candidate uses appropriate scientific terminology and accurate spelling, punctuation and grammar.</i> 3 – 4 marks Partial account of how MRSA has developed and some control measures described. or Detailed account of how MRSA has developed <u>or</u> several control measures described. <i>There is a line of reasoning which is partially coherent, largely relevant, supported by some evidence and with some structure. The candidate uses mainly appropriate scientific terminology and some accurate spelling, punctuation and grammar.</i> 1-2 marks Limited account of how MRSA has developed <u>or</u> some control measures described. <i>There is a basic line of reasoning which is not coherent, largely irrelevant, supported by limited evidence and with very little structure. The candidate used limited scientific terminology and inaccuracies in spelling, punctuation and grammar.</i> 0 marks No attempt made or no response worthy of credit.	6			6
