

3. The numbers of a species in a habitat can be investigated by using quadrats.

The results of an investigation into the variety of snail species found in two habitats are shown below.

Habitat X

Quadrat	Number of snails				Total number of snails
	Species A	Species B	Species C	Species D	
1	0	2	3	1	6
2	0	0	3	2	5
3	0	1	3	1	5

Habitat Y

Quadrat	Number of snails				Total number of snails
	Species A	Species B	Species C	Species D	
1	0	0	1	2	3
2	0	0	4	3	7
3	0	0	1	3	4

- (a) Use the data above to answer the following questions.

- (i) State how many species of snail are found in habitat X. [1]
- (ii) State which species are found in both habitats. [1]
- (iii) Habitat X has an area equal to 15 quadrats. Estimate the total number of snails of species C you would expect to find in habitat X. [2]

Total number =

- (iv) State **one** way the experiment could be improved so you have more confidence in your answer in (iii). [1]

.....

- (b) Snail **A** has the scientific name *Cornu aspersum*. State the advantage of using its scientific name rather than its common name. [1]

.....
