

(ii) State the **two** variables that need to be controlled in this experiment. [2]

1

2

(iii) State **one** reason why these variables need to be controlled. [1]

.....
.....

(b) In a different experiment hydrochloric acid was poured into a flask containing different volumes of sodium thiosulfate solution and water. The time taken to react was measured. The results are shown in the table below.

Volume of acid (cm ³)	Volume of sodium thiosulfate (cm ³)	Volume of water (cm ³)	Time for cross to disappear from view (s)
60	55	5	44
60	50	10	51
60	45	15	57
60	40	20	83
60	35	25	106

(i) State what conclusion can be made from the results. [1]

.....
.....

(ii) Explain the results in terms of particles. [2]
