

2. Microorganisms are regularly used in food production. However, unless precautions are taken, microorganisms can also cause food poisoning.

(a) (i) Describe the process of making cheese from milk. [3]

.....

.....

.....

.....

(ii) State the optimum conditions required in this process. [3]

.....

.....

.....

.....

- (b) Pasteurisation is a process that allows milk to be stored for longer. The graph shows how bacterial growth varies with temperature.

Use the information in the graph to explain why milk is pasteurised at temperatures of about 70°C. [2]
