

8. The photograph below shows a group of young male cheetahs eating a wildebeest.

A team of scientists from the Mara Cheetah Project estimated that the adult population of cheetahs in the Masai Mara Game Reserve in Kenya stood at 30 individuals in the summer of 2016.

The population between 1850 and 1900 has been estimated to have been around 55 individuals in this area. The graph below shows the approximate numbers of adult cheetahs in this area from 1850 to 2016.
