

4. The diagram shows the human digestive system.

(a) State which of the **labelled parts** in the above diagram absorbs digested food molecules. [1]

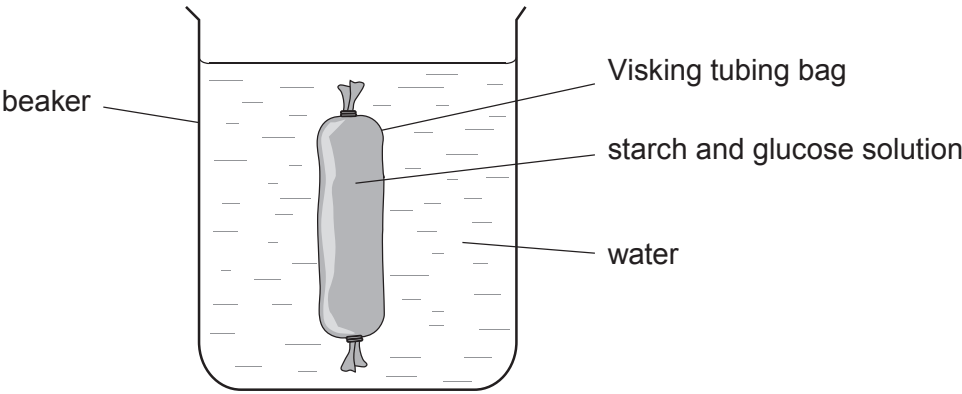

.....

(b) Visking tubing acts as a model of absorption in the digestive system.

The diagram shows a Visking tubing bag filled with a solution of starch and glucose, in a beaker of water.

Samples from inside the Visking tubing bag and the water in the beaker were tested for starch and glucose at the start. This was repeated after 10 and 20 minutes.

(i) **Complete the table below** by writing a ✓ or x in each space to show the expected results at 10 and 20 minutes. [3]

key: ✓ molecule present x molecule absent

Sample tested	Tested for	Start	Time after start (minutes)	
			10	20
Contents of Visking tubing bag	starch	✓	✓	✓
	glucose	✓	✓	
Water in the beaker	starch	x		
	glucose	x		

(ii) Use your knowledge of the size of starch and glucose molecules to explain the expected results **at 20 minutes** for **the water in the beaker**. [2]
