

7. Fertilisers used by farmers can accidentally enter lakes.
In 2016, Natural Resources Wales reported that 12 lakes contained high levels of nitrates from fertilisers.

(a) Suggest how the fertilisers accidentally entered these lakes.

[1]

- (b) Students used a computer to model the effect of fertiliser on dissolved oxygen content and bacteria numbers in a lake, after adding fertiliser.
The results are shown in **Graph 7.1**.

Graph 7.1

- (i) Calculate the **percentage** increase in dissolved oxygen from the start of March to the start of May. [2]

Increase = %

- (ii) Explain why the dissolved oxygen content and number of bacteria change from May to September. [3]
