7	Indicative content: A: Cell division • Mitosis • DNA mass doubles, then halves/ returns to same content • one cell cycle is within 24 hours B: DNA mass • DNA replication occurs during interphase • Causing DNA to double • After interphase DNA mass remains constant • After interphase DNA present as chromosomes/ 2 chromatids • Mass DNA halves at telophase/ cytokinesis • when nuclear membrane reforms C: Cell mass • Interphase: mass of cell increases • As does cell size • Mass of cell continues to increase • due to replication of DNA / organelles • and possibly due to formation of spindle fibres • cell undergoes cytokinesis and mass of cell halves	4	5	0	9	0	0
