

Question				Marking details	Marks available					
					AO1	AO2	AO3	Total	Maths	Prac
6.				<u>General Adaptations:</u> - Heterotrophic - Obtain nutrition from the host - Produce large numbers of eggs / offspring - Resistant stages / eggs		5	4	9		
				<u>Specific Adaptations (Taenia):</u> - Endoparasite {2 / primary & secondary / intermediate} hosts						
				scolex / hooks / suckers	to prevent removal (by peristalsis)/ attach to gut wall					
				Long & flat / no digestive system	Large sa: volume ratio to absorb pre-digested nutrients / pre-digested nutrients absorbed across {cuticle / body surface}					
				Thick cuticle/ mucus	to prevent digestion by host's enzymes/ immune system					
				Hermaphrodite/ or description of	self-fertilisation/ unable to find mate / allows them to reproduce					
				<u>Specific Adaptations (Pediculus):</u> - Ectoparasite - Single host						
				claws (adult) / "glue" (eggs / nits)	to prevent removal (by scratching)/ to attach to hairs					
				holozoic	has gut for {digestion / absorption}					
				Piercing mouthparts	sucks blood					
				Separate sexes	as a mate is easy to find
