

Question	Marking details	Marks Available					
		AO1	AO2	AO3	Total	Maths	Prac
6	Indicative content Definitions: mesophyte – adapted to conditions of {adequate/moderate/sufficient/owtte} water supply xerophyte – adapted to conditions where water is scarce/groundwater is frozen/named example/dry conditions. hydrophyte – adapted to aquatic conditions/live in water/float on surface of water Pinus/xerophyte Adaptations to reduce transpiration/water (vapour) loss Comments must relate to image Reject adaptations not visible Linked points: • Sunken stomata/stomata in pits + trap humid air/to reduce {diffusion/concentration/water potential} gradient • Small leaves/needle shaped/compact + reduce surface area/SA:vol • {fewer/smaller} stomata + {fewer/smaller} gaps for water loss • <u>Thick</u> cuticle/epidermis + reduce evaporation/water loss • Fibres/sclerenchyma/lignified tissue + provides support/prevents wilting Potamogeton/hydrophyte Linked points: • Cuticle thin/absent + no need to reduce water loss/evaporation • Stomata on {upper/adaxial} surface/no stomata on {lower/abaxial} surface + for gas exchange with air • Air spaces/Aerenchyma/lacunae + provide { buoyancy/flotation} for {light/photosynthesis}/{act as gas reservoir/for gas exchange} • {Little/no} {lignified tissue/xylem} + water provides support • Poorly developed/little xylem + water provided by surroundings	3	6		9
