					AO1	AO2	AO3	Total	Maths	Prac
	(d)			Any four (×1) from: A. Increases (up to a maximum / 60) and then decreases (1) B. Depolarisation only takes place at the nodes / Correct reference to saltatory conduction (1) C. Less membrane needs to be depolarised / action potential does not have to travel the whole length of the neurone (1) D. (The Longer the internode the conduction speed increases) due to {less 'jumps' from node to node / influences of local currents increase} (1) E. When internodes are too long, {impulses not able to jump from node to node / local currents are unable to extend to next node / no saltatory conduction} (1)		2	2	4		4
