

4. The experiment shown in **Image 4.1** was set up to investigate respiration in germinating peas.

Image 4.1

The flasks all contained an equal mass of peas. **Table 4.2** shows the treatment that each flask received:

Table 4.2

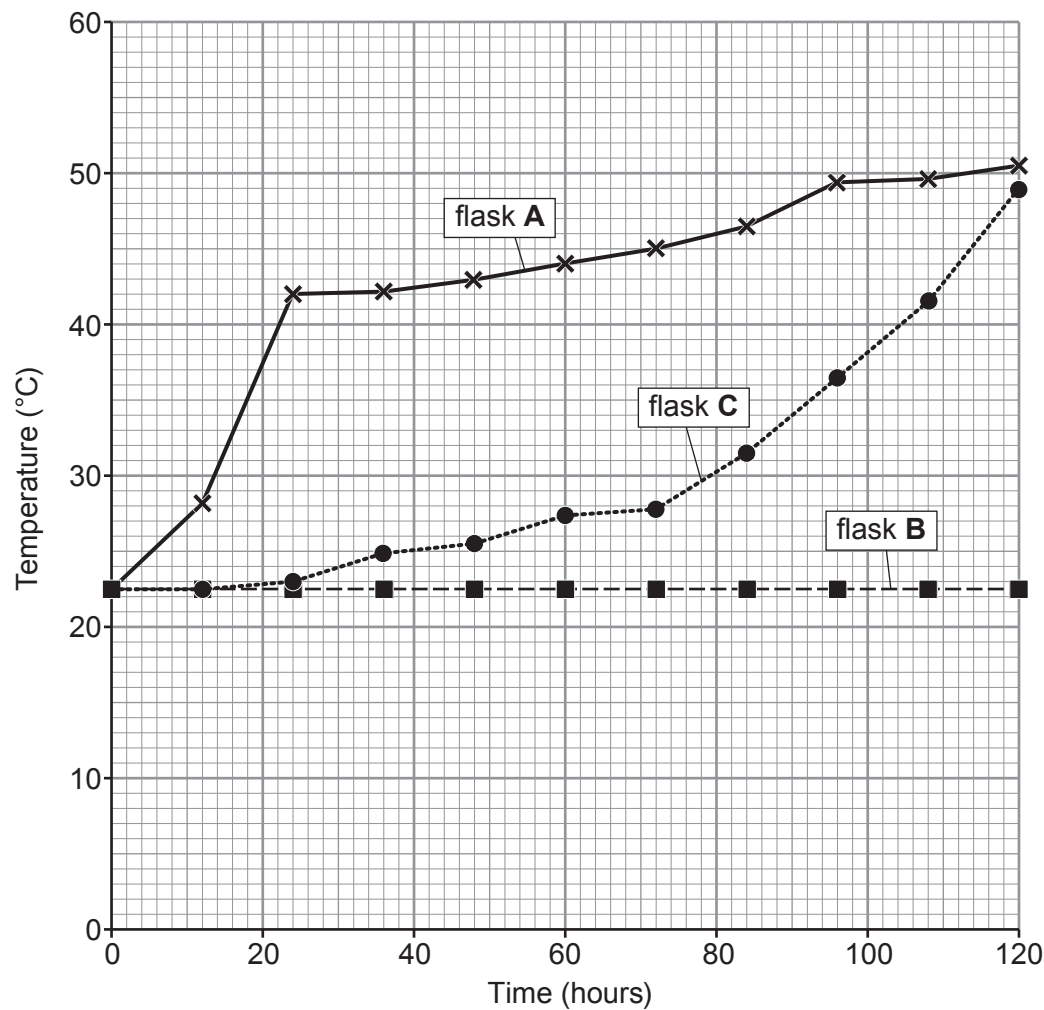

Flask	Treatment
A	Germinating peas soaked in disinfectant.
B	Germinating peas which had been boiled for 30 minutes then soaked in disinfectant.
C	Germinating peas which had been boiled for 30 minutes.

The temperature of the flasks was monitored for 120 hours.

The results of the experiment are shown below in **Graph 4.3**.

Graph 4.3

- (a) (i) State the purpose of soaking the peas in disinfectant in flasks **A** and **B**. [1]

.....

.....

- (ii) Explain the results for flask **A** between 0 and 24 hours. [2]
