- (iv) This trial did not use a placebo. Suggest why a placebo could be considered unethical in this trial.

[1]

- (b) mAb-114 is a monoclonal antibody. It was developed using blood samples isolated from an Ebola survivor in 1995.

Outline the pre-clinical stages, in the correct sequence, which would have been carried out before the treatments could be used for clinical trials.

Describe how the monoclonal antibody mAb-114 could have been produced using lymphocytes from a sample of survivor's blood. [6]
