

10. The 4CMenB vaccine was created to target a bacterium called *Neisseria meningitidis*, which causes a form of a disease called meningitis. The vaccine has also been found to reduce the rates of a sexually transmitted infection (STI) called gonorrhoea. Gonorrhoea is caused by a bacterium called *Neisseria gonorrhoeae*.

- (a) Explain how the 4CMenB vaccine causes the body to develop immunity against *Neisseria meningitidis*. [4]
