

4. Halogenoalkanes are hydrolysed by aqueous sodium hydroxide. State and explain which of 1-fluoropropane, 1-chloropropane and 1-bromopropane is hydrolysed most rapidly. [2]

.....

.....

.....

5. (a) State the type of polymerisation involved when 2-fluorobut-2-ene, $\text{CH}_3\text{CF}=\text{CHCH}_3$, forms a polymer. [1]

.....

- (b) Draw **one** repeat unit of the polymer formed when 2-fluorobut-2-ene is polymerised. [1]

6. Complete the equation for the formation of ethanol by the fermentation of glucose. [1]
