

5. The structure of paraldehyde is shown below.

Explain what would be seen in the ^{13}C NMR spectrum of this compound.

References to the positions of the chemical shifts are **not** required.

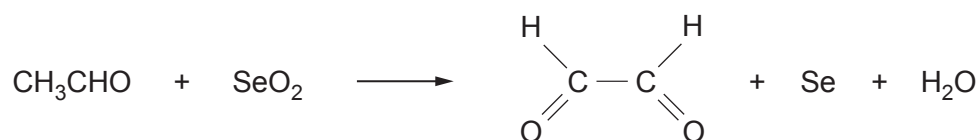

[2]

.....

.....

.....

6. Ethanal is oxidised by selenium dioxide giving ethanedial.

Calculate the atom economy of this reaction to produce ethanedial.

Give your answer to an **appropriate** number of significant figures.

[2]

Atom economy = %

10
