

10. (a) Some household cleaners are a concentrated solution of ammonia.

To determine the concentration of an ammonia solution, 10.0 cm^3 of a household cleaner was titrated with dilute sulfuric acid of concentration 1.5 mol/dm^3 .

The end-point was determined by using the indicator methyl orange.

The procedure was repeated three times and the mean volume of dilute sulfuric acid needed to neutralise 10.0 cm^3 of the ammonia solution was found to be 12.0 cm^3 .

- (i) Use the equation below to calculate the number of moles of sulfuric acid in 12.0 cm^3 of the 1.5 mol/dm^3 solution. [2]

$$\text{concentration} = \frac{\text{number of moles}}{\text{volume}}$$

Number of moles of sulfuric acid = mol

- (ii) Ammonia solution reacts with sulfuric acid according to the equation below.

Use the equation for the reaction to find the number of moles of ammonia in 10.0 cm^3 of the household cleaner. [1]

Number of moles of ammonia = mol

- (iii) Calculate the concentration of ammonia in mol/dm^3 . [2]

Concentration of ammonia = mol/dm^3

(b) The diagram shows two reactions of dilute hydrochloric acid.

- (i) Predict the temperature change if dilute ethanoic acid, CH_3COOH , is added to sodium hydroxide instead of dilute hydrochloric acid. Give the reason for your answer. [2]

.....

.....

.....

- (ii) A salt is formed when ethanoic acid is added to copper(II) carbonate.

I. Give the name of the salt.

.....

[1]

II. The negative ion present in the salt is CH_3COO^- .

Underline the correct formula of the salt.

[1]
