

2. The chemical formula of potassium carbonate is K_2CO_3 .

(a) (i) State how many carbon atoms are present in the formula, K_2CO_3 [1]

(ii) Give the **total** number of atoms shown in the formula, K_2CO_3 [1]

(b) Calculate the percentage by mass of carbon in potassium carbonate, K_2CO_3 . [2]

percentage by mass = %
